DetectaCam 3G Covert Speaker Camera

DetectaCam Fan Unit

The DetectaCam system is a genuinely mobile, easily deployed surveillance solution that can be deployed in a wide variety of situations with only the need for a 12V or 240V power supply. All cameras come with a choice of housings and connect into a control room.

As soon as an intruder is detected a series of colour images of the event taking place are uploaded to the

Control Room or Office. DetectaBase can continuously monitor hundreds of locations.

When a new event is received an alarm sounds and images automatically load with details of the relevant property or location allowing the Operator to identify the nature of the alarm and take appropriate action.

## DETECTACAM MOBILE SURVEILLANCE

## DetactaCam 3G

- 3G  
Rapid image uploading utilising 3G Network
- One Button Setting  
Point and set with single button
- Video Motion Detection  
Can be set to recognise any movement within a defined area
- Colour Images or Video  
Takes Colour Images or Video of intrusions
- Instant Notification  
Receive images in seconds
- Detectabase Receiving Centre  
Our software control centre for monitoring multiple locations

Multiple installations of DetectaCam allow large numbers of locations to be monitored simultaneously, with visual alarm notifications received in seconds.

Even when phone lines are cut or the local alarm system is inoperative the DetectaCam will continue to take images and send them to the DetectaBase Server. The portable nature of the devices means that you can position them rapidly.

### DetactaBase Control Room Management Suite

DetactaBase is a control room management suite for receiving alarms from remote DetectaCams, which is included as standard in each DetectaCam kit. It can monitor hundreds of Cameras at any one time and provide instant images or activity, together with information regarding the property, residents and history of the crime scene.

With high quality colour image uploads the duty officer can take the most appropriate

response, armed with information about the intruder, the premises, the crime scene and the actual crime.

“ We approached Globe Police Solutions to specify a product suitable for a high profile national operation, seeking to protect the public railway infrastructure. GPS recommended a rapid deployment, remote solution, which satisfied our requirement, exactly and economically.

The results were excellent and building on this success, we are now working with them (GPS) on enhanced product development.

Aside from the advice and supply, the pre and post sales service was exemplary. ”

British Transport Police

## Product Comparison Chart

GPS Product Description	Low Light Capable	External Waterproof	Remote Notification	Longer Range	Covert Housing	Battery Compatible	Local Storage
DetactaCam 3G	Optional	Optional	Yes 3G	Optional	Yes	Optional	No
